

**CLAIMS**

I claim:

- 5        1. An incline-adjustable air mattress comprising:  
a base section having top, bottom and perimeter walls, and  
also having air valve members being disposed in said perimeter  
wall, and further having an air chamber disposed between said top,  
bottom, and perimeter walls;  
10        intermediate sections being disposed upon and connected to  
said base section; and  
upper sections being disposed upon and connected to said  
intermediate sections.
- 15        2. The incline-adjustable air mattress as described in claim 1,  
wherein said perimeter wall of said base section is generally an  
endless strip being disposed along edges of said top and bottom  
walls and has a width which is generally uniform throughout.
- 20        3. The incline-adjustable air mattress as described in claim 2,  
wherein said intermediate sections include a head intermediate  
section being disposed upon a front portion of said base section,  
and also include a foot intermediate section being disposed upon a  
rear portion of the said section and being spaced from said head  
25        intermediate section.
4. The incline-adjustable air mattress as described in claim 3,  
wherein said each of said intermediate section has a main wall and  
a perimeter wall and also has air valves being conventionally  
30        disposed in said perimeter wall, said perimeter wall of each said

intermediate section including side and end walls, said side walls being tapered away from said end walls.

5           5. The incline-adjustable air mattress as described in claim 4,  
wherein said intermediate sections have air chambers being  
disposed between said main walls and said perimeter walls of said  
intermediate sections and said top wall of said base section, upon  
said air chamber of said head intermediate section being filled with  
air said main wall of said head intermediate section being inclined  
10 at approximately 15 degrees relative to said top wall of said base  
section, upon said air chamber of said foot intermediate section  
being filled with air said main wall of said foot intermediate  
section being curved.

15           6. The incline-adjustable air mattress as described in claim 5,  
wherein said upper sections include a head upper section being  
attached upon said head intermediate section, and also include a  
foot upper section being attached upon said foot intermediate  
section and being spaced from said head upper section.

20           7. The incline-adjustable air mattress as described in claim 6,  
wherein each of said upper section has a main wall and a perimeter  
wall and also has air valves being disposed in said perimeter wall,  
said perimeter wall of each said upper section including side and  
25 end walls, said side walls of said upper sections being tapered away  
from said end walls of said upper sections.

          8. The incline-adjustable air mattress as described in claim 7,  
wherein said upper sections have air chambers being disposed  
30 between said main walls and said perimeter walls of said upper

sections and said main walls of said intermediate sections, upon  
said air chamber of said head upper section being filled with air  
said main wall of said upper section being inclined at an angle of  
approximately 30 degrees relative to said top wall of said base  
5 section, upon said air chamber of said foot upper section being  
filled with air said main wall of said foot upper section being  
curved.
